饶琳孩侦忼藏 \

Since the early days of modern computers, researchers and developers alike have tried to find acronyms – short abbreviations – which in one short word can describe methods for human-computer interaction. This lecture starts in the 1980s WIMP paradigm (Windows-Icons-Menus-Pointers) and onwards to SILK (Speech-Image-Language-Knowledge). Most time is spent on our current “buzzword” for discussing the interfaces of today (SMILE: Speech-Movement-Image-Language-Environment) and implications of new trends in interaction.
